Key Features

¢	OWASP Top 10 Protection		
P	Zero Day attack Protection	3	
Þ	Anti-Bot Security	<u> </u>	
•	Layer 3 – 7 DDoS Protection	T	
¢	On-demand & Periodic Web Security Scanning		
¢	Traffic Distribution & Failover Management		
	Improved Realtime Visibility		
•	Enforce Compliance		
	Scalability		
•	Easy Setup & Integration		

Web applications are common target of cyber-attacks because they are easily exploitable and offer an entry point to sensitive user information and data. To combat cyber attackers, organizations need to protect their websites and webservices from existing and emerging cyber threats without affecting application performance and availability. Haltdos Cloud WAF-as-a-Service is a cloud native SaaS based web application firewall (WAF) that protects public as well as private cloud hosted web applications from the OWASP Top 10 threats, Zero-day attacks, application DDoS and many more.

Haltdos Cloud Web Application Firewall

leverages a combination of signature and machine learning to block all attack attempts directed at web-facing applications. With built-in bot protection, Haltdos can accurately identify bots from human traffic and restrict spam, crawlers and content scrapers from misusing your applications.

Haltdos Cloud WAF-as-a-Service uses multi-cloud environment to provide a truly global Edge network across North & South Americas, Europe, Africa, Asia and Australia with traffic capacity to manage over 6 Tbps – 3x times than the largest known DDoS attack. The service is backed by managed services to configure, monitor and mitigate attacks 24x7 by Haltdos SOC & Support teams.

Our Cloud WAF-as-a-Service helps application owners to:

Reduce the risk of data theft and security breaches through vulnerable applications

Prevent application downtime due to DDoS attacks

Improve reliability and resilience with built-in Application Delivery & Traffic Management

Defend against new and emerging threats

Enforces PCI DSS and HIPPA compliances to ensure website meets the highest standards of data protection

No matter where your applications are deployed, it's important to be able to quickly and easily scale security across the entire infrastructure. You can easily deploy and integrate our **Cloud WAF** with your existing security solutions within minutes.

Web Applications remains #1 source of security breaches and application-layer attacks are showing no signs of abating. You need a modern, wholistic solution to protect your critical applications.

Get comprehensive and continuous protection for your applications with **HaltDos.**
